

Our Strategy

Five Components Are Needed to Develop HAL

- Voice Recognition
- Natural Language Processing
- Task-Specific Algorithms
- AI Deep Learning
- Transactional Capabilities

All of the components, except for the task-specific algorithms and AI deep learning, can either be leased or bought. These two components are what we bring to the table.

Once HAL's first module (Investor) is developed, the revenue from this module will finance HAL's next module (Financially Unsophisticated). These two modules along with each of the modules that follow, such as Elder Care, Cognitively Impaired, Self-Employed, Accountant, and Financial Advisor, will generate sufficient revenue so that HAL's buildout will be self-financed.
